1. System Overview

The Logistics Dashboard is an automated quoting system that receives shipment requests from customers via WhatsApp, Telegram, or Email, automatically calculates prices or requests quotes from vendors, and manages the entire process from request to final price delivery.

How It Works (The Big Picture)

- * Customer sends message via WhatsApp, Telegram, or Email
- * System reads and understands the message using AI
- * Looks up internal pricing for the requested route
- * If price found: sends quote to customer automatically
- * If no price: creates RFQ and sends to all relevant vendors
- * Vendors reply with their prices
- * System picks the lowest price and adds your margin
- * Admin reviews and approves (or rejects)
- * Customer receives the final price

What This Means for You

- * Customers get instant responses when routes are covered
- * Vendors compete for uncovered routes via automatic RFQ
- * You control everything through approval or rejection
- * No manual data entry for incoming requests

Note: The system handles the heavy lifting. Your job is to review, approve, and manage exceptions.

2. Home Dashboard

When you log in, the Home page gives you a complete picture of your business at a glance.

Key Metrics (Top Row)

Revenue	-- Total value of all approved and sent quotes
Active Vendors	-- Number of vendors ready to receive RFQs
Open RFQs	-- RFQs waiting for vendor responses
Unmatched Replies	-- Vendor replies needing manual matching
System Mode	-- Current automation setting (Auto / Manual)

Status Row

Below the key metrics, you will find detailed statistics:

- * Total Requests: All customer messages received
- * Total Quotes: All quotes created in the system
- * Pending: Quotes waiting for your action
- * Approved: Quotes you have approved
- * Rejected: Quotes you have rejected
- * Sent: Quotes successfully delivered to the customer
- * Ready to Send: Auto-approved but not yet delivered
- * Avg Response Time: How fast you process quotes
- * Approval Rate: Percentage of quotes you approve

Coverage Breakdown

Shows how requests are handled across your business:

- * Internal Pricing: Auto-priced from your route database
- * RFQ: Sent to vendors for competitive bidding
- * No Coverage: No pricing available and no vendors found
- * Data Request: Missing information from the customer

Top Routes

Your most popular shipping lanes. Use this to identify which routes need better vendor coverage or internal pricing.

Recent Pending Quotes

Quick access to quotes that need your attention right now. Click any quote to review and take action.

3. Quotes

The Quotes page is your main workspace. This is where you review, approve, and reject customer requests.

Understanding Quote Cards

Each quote card is color-coded by status for instant recognition:

Amber	Pending -- You need to approve or reject
Green	Approved -- Sent to customer
Red	Rejected -- Customer was notified
Blue	Ready to Send -- Auto-approved, waiting to deliver
Green	Sent -- Successfully delivered to customer

Card Layout

Each card shows all essential information in a clear layout:

- * Quote ID and status badges
- * Customer name and shipping route
- * Weight, postal codes, language, and channel
- * Coverage type: Internal, RFQ, No Coverage, or Data Request
- * Price and date on the right side

Filters

Use filters to find specific quotes quickly:

- * Status: Pending, Approved, Rejected, Ready to Send, Sent
- * Channel: WhatsApp, Telegram, Email
- * Language: Filters by customer language
- * Date Range: From/To dates for time-based searches
- * Search: Find by customer name, route, or currency

Quote Detail Page

Click any quote to see the full details and take action.

Information Panel

Shows all quote details including customer info, origin/destination, weight, cargo type, pricing breakdown, language, channel, and system mode at time of creation.

RFQ Details (if applicable)

If this quote went through the RFQ process, you will see all vendors who received the request, their individual responses and prices, and which vendor had the lowest bid (marked as Selected). You can also manually select a different vendor if needed.

Review Decision Panel

For pending quotes, this is where you take action:

- * Approve: Send the price to the customer. You can revise the price, add notes, and customize the customer message.
- * Reject: Decline the request with a reason. The customer receives a rejection message.

Creat

If a quote has no internal pricing and no RFQ was created automatically, you can manually create an RFQ directly from the quote detail page. Select the target country and the system will send the RFQ to all active vendors covering that country.

4. RFQ Management

RFQ (Request for Quote) is the process of asking vendors for prices when you do not have internal pricing for a route.

How RFQs Work Automatically

- * Customer requests a quote for a route with no internal price
- * System finds all active vendors covering the destination country
- * Sends RFQ to every vendor via their preferred channel (Email or WhatsApp)
- * Vendors reply with their prices
- * After the waiting period expires, system picks the lowest bid
- * Admin reviews and approves or rejects

RFQ Status

Each RFQ has one of three statuses:

Open	Waiting for vendor responses
Responded	Vendors have replied, ready for review
Closed	Process completed

Note: RFQs are fully automated. You do not need to manually send them or chase vendors. Just monitor the status and review results when ready.

5. Vendors

Vendors are your partners who provide prices for routes you do not cover internally. Keeping your vendor list up-to-date is critical for the RFQ process.

Adding a Vendor

Go to Master Data -> Vendors and click Add Vendor. Fill in the following fields:

Field	Required	Description
Name	Yes	Company or contact name
Country Coverage	Yes	Which country they serve
City	No	Specific city if applicable
Priority Ranking	No	Lower number = higher priority
Use Custom Margin	No	Special markup for this vendor
Margin Rate (%)	No	Only if custom margin is checked
Email	No	For email-based RFQs
Phone	No	For WhatsApp-based RFQs
Preferred Channels	No	Email and/or WhatsApp
Active	Yes	Whether they receive RFQs
Notes	No	Special agreements or info

Vendor-Specific Margins

Normally, all vendor prices get the global margin from Settings. But you can set a custom margin per vendor.

Example:

- * Vendor A has custom margin 15%: \$100 bid becomes \$115 final
- * Vendor B uses global margin 20%: \$90 bid becomes \$108 final

Note: Use custom margins for vendors with special agreements or different commission structures.

6. Route Pricing

Route Pricing is your internal price database. When a customer requests a quote for a route that exists here, they get an instant automatic response without waiting for vendors.

Adding Route Pricing

Go to Master Data -> Route Pricing and click Add Pricing.

Field	Required	Description
Origin Region	Yes	Where shipment starts
Destination Region	Yes	Where shipment ends
Base Price	Yes	Your cost for this route
Markup (%)	Yes	Your profit margin
Currency	Yes	EUR, USD, TRY, etc.
Active	Yes	Whether this price is live

Price Calculation

$$\text{Final Price} = \text{Base Price} \times (1 + \text{Markup} / 100)$$

Example: Base \$1,000 + Markup 20% = Final Price \$1,200

Note: The customer receives the final price instantly. No waiting, no manual calculation.

Importing Pricing

For bulk updates, use the Import Data feature. Download the example Excel file to see the exact format required.

7. System Settings

Go to Master Data -> System Settings to configure how the system behaves.

Master Logic Toggle

This is the most important setting. It controls when customers get automatic responses:

Auto Send Mode

- Customer gets instant price for covered routes
- RFQ prices go directly to customer after vendors reply
- Fastest mode, least admin work
- Best for: Established routes with trusted pricing

Manual Approval Mode

- Everything stays pending for admin review
- Even RFQ results wait for your approval
- Maximum control over every quote
- Best for: New business, testing, or high-value shipments

Low Confidence Only

- Auto-sends for high-confidence parsing results
- Keeps low-confidence results pending for review
- Balanced approach between speed and control

Waiting Period

How long the system waits for vendor responses before closing an RFQ:

- * 1 minute: For testing only
- * 30 minutes: Good for urgent requests
- * 2 hours: Standard business practice
- * 24 hours: For vendors in different time zones

Global Markup (%)

The default profit margin applied to all vendor prices. You can override this per vendor using the custom margin feature.

8. Import Data

Instead of adding data one by one, you can bulk import from Excel files. This saves significant time when setting up or updating the system.

Supported Import Types

- * Postal Codes: Maps postal code prefixes to regions
- * Route Pricing: Bulk import shipping prices
- * Vendors: Bulk import vendor contacts

How to Import

- * Go to Master Data -> Import Data
- * Select the import type from the dropdown
- * Click Download Example XLSX to see the required format
- * Fill your data in the same column structure
- * Upload the file using the file picker
- * System shows how many records were inserted and skipped

Note: Always download the example file first. Using the wrong format will cause imports to fail or skip records.

Important Notes

- * Vendors: Each sheet in the Excel file represents one country
- * Route Pricing: First 2 rows are headers, data starts from row 3
- * Postal Codes: Supports ranges like 01-09 which expands automatically

9. Unmatched Replies

Sometimes vendors reply but forget to include the RFQ reference number. These replies land in Unmatched Replies for manual processing.

Why Replies Become Unmatched

- * Vendor forgot to include RFQ reference number
- * Vendor replied from a different email or phone number
- * Multiple open RFQs exist for the same vendor
- * System could not extract a price from the reply text

How to Handle

1. Attach to RFQ

Use this when the reply contains a valid price and you know which RFQ it belongs to. Click Attach to RFQ, enter the reference number (e.g., RFQ-20260504-001), and the system matches the vendor and records the price.

2. Mark as Resolved

Use this when you have handled the reply outside the system. It removes the item from the active list.

3. Mark as Ignored

Use this for spam, test messages, or irrelevant replies. It removes the item from the active list.

Note: Check Unmatched Replies daily. Every unmatched reply is a potential lost vendor bid.

10. Key Business Rules

When Customers Get Messages

Customers are ONLY notified when:

- * Route has internal pricing AND auto-send is enabled
- * Admin approves a quote
- * Admin rejects a quote

Customers are NEVER notified when:

- * Quote is pending (unless auto-send mode)
- * RFQ is waiting for vendor responses
- * Data is missing from the request

Price Calculation

Internal Pricing:

Final Price = Base Price x (1 + Markup / 100)

Vendor Pricing:

Final Price = Lowest Vendor Bid x (1 + Margin / 100)

Vendor Selection

- * ALL active vendors covering the destination country receive the RFQ
- * There is no limit on vendor count
- * System picks the LOWEST bid automatically
- * Admin can revise the price before final approval
- * Admin can also manually select a different vendor from the RFQ Details panel

Oversize Loads

If shipment weight exceeds the threshold (default 22 tons):

- * Quote is automatically set to Pending
- * Reason shows: Oversize Load
- * Admin must review manually before sending

11. Testing Environment

Before going live, the system can be tested using the credentials and contact points below.

Test Channels

WhatsApp

Our test WhatsApp Business number is:

+1 (555) 637-5901

This is the company number where customers send their shipment requests. You can send test messages to this number to see how the system parses and processes them.

IMPORTANT: If you want to use this test WhatsApp number to send quotes and receive vendor requests via WhatsApp, you **MUST** provide your list of phone numbers to the system administrator. The Meta Business Manager test number has a maximum limit of 3 registered numbers. Without adding your number to the allowed list, WhatsApp messages will fail.

Telegram

Our test Telegram bot is:

@adasdasdsasdbot

Start a chat with this bot to send test shipment requests. The bot will respond just like a real customer channel.

Email

Our test email address is:

ahmed.shoshan@outlook.com

Send test quote requests to this email address. The system will process them just like customer emails.

How to Test

- * Send a test message to any of the channels above with a sample shipment request
- * Include: origin city, destination city, weight, and cargo type
- * Check the Quotes page to see if the system created a quote correctly
- * If no internal pricing exists, manually create an RFQ from the quote detail page
- * Wait for vendor responses or simulate a vendor reply
- * Approve or reject the quote and verify the customer receives the response

All test messages are processed through the same pipeline as live messages. The only difference is the contact points. Make sure your vendor list and route pricing are configured before testing end-to-end.

Thank You

For questions or support, contact your system administrator.
